

VNC Ctrl, Alt, Del Not Working.

Problem: When you are in a Real VNC session you find that when you press the Ctrl, Alt, Del keys on the keyboard the task manager for that local machine displays; rather than initiating the Ctrl, Alt, Del on the VNC session that you are currently in.

Solution: To fix this you may have to press Shift, Ctrl, Alt, Del. This should take care of your issue. Just remember that every time you want to initiate a Ctrl, Alt, Del, make sure you actually press Shift, Ctrl, Alt, Del.

Note: If this still does not work you can visit Real VNC's FAQ's at the following link.
